

NomadReady PH — Hackathon MVP Scope Document

1. Hackathon Solution

NomadReady PH gives LGUs a simple internal dashboard to evaluate and improve digital nomad readiness.

The LGU enters or reviews local destination data such as work-friendly cafés, accommodations, transport, safety services, attractions, and power backup options.

The system then:

1. Calculates a rule-based Digital Nomad Readiness Score
2. Shows category-level gaps
3. Displays local assets on a simple map
4. Uses AI to explain the score
5. Generates recommended actions for the LGU

AI does not invent the score. The score is calculated using fixed rules. AI explains the result and suggests improvements based on the data available.

2. Primary User

Municipal Tourism Officer

For the demo, the user represents:

Carles Municipal Tourism Office

This user wants to understand whether Carles is ready for digital nomads and what improvements should be prioritized.

3. MVP Demo Flow

The hackathon demo should follow this simple flow:

1. User opens the Carles LGU dashboard
2. User sees the current Digital Nomad Readiness Score
3. User reviews category scores
4. User sees local assets on the map
5. User checks top readiness gaps

6. User clicks **Generate AI Recommendations**
7. AI explains what Carles is strong at and what it should improve first
8. User sees a simple action plan for the tourism office

This is the core winning demo.

4. MVP Scope

In Scope

The hackathon MVP will include:

- One LGU dashboard for Carles, Iloilo
- Digital Nomad Readiness Score
- Category score breakdown
- Simple rule-based scoring engine
- AI-generated explanation and recommendations
- Local partner/listing table
- Simple map with pins
- Top gaps and action plan
- Demo dataset for Carles

Out of Scope

The hackathon MVP will not include:

- Full public digital nomad web app
 - Nomad destination matcher
 - Business owner portal
 - User reviews
 - Community feedback workflow
 - Payments
 - Bookings
 - Provincial dashboard
 - Real-time Wi-Fi speed testing
 - Full report generator
 - Mobile app
 - Multi-LGU comparison
-

5. Reduced Readiness Categories for Hackathon

The full product can use 8 categories later. For the hackathon, the prototype will use 5 categories so the demo is easier to build, explain, and judge.

5.1 Internet & Work Readiness

Measures whether digital nomads can work online.

Includes:

- Verified Wi-Fi speed
- Mobile data coverage
- Work-friendly cafés
- Power outlets
- Zoom-friendly spaces

5.2 Long-Stay Accommodation

Measures whether digital nomads can stay for weeks or months.

Includes:

- Monthly stay options
- Published monthly rates
- Wi-Fi availability
- Desk or work area
- Kitchen or laundry access

5.3 Safety & Essential Services

Measures whether the destination has basic support services.

Includes:

- Clinic or hospital
- Police or emergency contact
- Pharmacy
- ATM
- Laundry
- Grocery

5.4 Transport & Access

Measures whether the destination is easy to reach and move around.

Includes:

- Access from Iloilo City or nearby airport
- Port or terminal availability
- Local transport
- Published schedules or travel information

5.5 Tourism & Lifestyle Appeal

Measures whether the destination is attractive outside working hours.

Includes:

- Island hopping
- Beaches
- Food experiences
- Weekend activities
- Tour operators
- Community or local events

6. Hackathon Scoring Formula

Each category is scored from 0 to 100.

The final score is weighted based on importance to digital nomads.

Category	Weight
Internet & Work Readiness	30%
Long-Stay Accommodation	20%
Safety & Essential Services	20%
Transport & Access	15%
Tourism & Lifestyle Appeal	15%
Total	100%

Formula

Digital Nomad Readiness Score =
(Internet & Work Readiness × 0.30) +
(Long-Stay Accommodation × 0.20) +
(Safety & Essential Services × 0.20) +
(Transport & Access × 0.15) +
(Tourism & Lifestyle Appeal × 0.15)

Score Labels

Score Range	Label
0–39	Not Yet NomadReady

Score Range	Label
40–59	Emerging Destination
60–74	Developing NomadReady Destination
75–89	NomadReady Destination
90–100	Highly NomadReady Destination

7. Simple Rule-Based Scoring

For the hackathon, scoring should be easy to understand and easy to implement.

7.1 Internet & Work Readiness — 30%

Condition	Points
5+ verified work-friendly places with Wi-Fi	30
3–4 verified work-friendly places with Wi-Fi	20
1–2 verified work-friendly places with Wi-Fi	10
No verified work-friendly places	0

Additional points:

Condition	Points
At least 3 places publish Wi-Fi speed	25
At least 3 places are Zoom-friendly	20
At least 3 places have power outlets	15
Mobile data coverage is available	10

Maximum: 100 points

7.2 Long-Stay Accommodation — 20%

Condition	Points
5+ long-stay options	35
3–4 long-stay options	25

Condition	Points
1-2 long-stay options	10
No long-stay options	0

Additional points:

Condition	Points
Monthly rates are published	25
Listings have Wi-Fi	20
Listings have desk, kitchen, or laundry access	20

Maximum: 100 points

7.3 Safety & Essential Services — 20%

Condition	Points
Clinic or hospital is listed	25
Police or emergency contact is listed	20
Pharmacy is listed	15
ATM is listed	15
Laundry or grocery is listed	15
Safety notes are available	10

Maximum: 100 points

7.4 Transport & Access — 15%

Condition	Points
Main access route from Iloilo City is listed	30
Port or terminal is listed	25
Local transport option is listed	20
Schedules or fare information is available	15
Travel time is shown	10

Maximum: 100 points

7.5 Tourism & Lifestyle Appeal — 15%

Condition	Points
5+ attractions or activities are listed	30
3–4 attractions or activities are listed	20
1–2 attractions or activities are listed	10
No attractions listed	0

Additional points:

Condition	Points
Island hopping or beach activity is available	25
Tour operator is listed	20
Food, culture, nature, or wellness activity is listed	15
Event or community activity is listed	10

Maximum: 100 points

8. AI Integration

The AI feature for the hackathon is called:

AI Readiness Advisor

The AI receives structured data:

- Destination name
- Overall score
- Category scores
- Strongest category
- Weakest categories
- Missing data
- Local listings
- Current gaps

The AI then generates:

- Readiness summary
- Strengths
- Weaknesses
- Top 3 recommended actions
- Reason for each action
- Expected improvement area

Example AI output:

“Carles has strong tourism and lifestyle appeal because of its island-hopping and beach experiences. However, its digital nomad readiness is limited by the lack of verified work-friendly spaces and published Wi-Fi information. The LGU should first certify cafés or hotels as work-friendly spots, collect Wi-Fi speed data, and publish long-stay accommodation options.”

9. AI Guardrails

The AI must:

- Use only the data provided by the system
 - Not invent businesses, statistics, or services
 - Clearly mention missing data
 - Give practical recommendations for LGU action
 - Use a professional and constructive tone
 - Explain the score without changing the score
-

10. MVP Screens

For the hackathon, build only 4 main screens.

10.1 Screen 1: Dashboard Overview

Purpose:

Show the main status of Carles as a digital nomad destination.

Includes:

- Overall Digital Nomad Readiness Score
- Score label
- 5 category cards
- Top 3 gaps

- Top 3 AI recommendations
- Key metrics:
- Verified work-friendly places
- Long-stay options
- Essential services
- Attractions and activities

This is the main demo screen.

10.2 Screen 2: Destination Data / Local Assets

Purpose:

Allow the LGU to manage or display the data used for scoring.

Includes tabs or filters for:

- Work spots
- Accommodations
- Services
- Transport
- Attractions

Each listing should show:

- Name
- Type
- Location
- Key details
- Verification status

For the hackathon, editing can be simple. A seeded demo dataset is acceptable.

10.3 Screen 3: Map View

Purpose:

Show where the destination assets are located.

Map pins:

- Work spots
- Accommodations
- Services
- Transport

- Attractions

For the hackathon, the map can use demo coordinates and simple pins.

10.4 Screen 4: AI Readiness Advisor

Purpose:

Show AI explanation and action plan.

Includes:

- AI readiness summary
- Strengths
- Weaknesses
- Top 3 recommended actions
- Affected category
- Suggested next step

Example recommendations:

1. Certify 3–5 cafés or hotels as work-friendly spots
 2. Publish Wi-Fi speed and mobile data information
 3. Create monthly stay packages with local accommodations
 4. Publish a digital nomad guide for Carles
 5. Identify backup-power locations for remote workers
-

11. Demo Dataset

The MVP should include seeded sample data for Carles.

Work Spots

Example fields:

- Name
- Type
- Wi-Fi speed
- Power outlets
- Zoom-friendly
- Verification status

Accommodations

Example fields:

- Name
- Type
- Monthly rate
- Wi-Fi
- Desk
- Kitchen or laundry
- Verification status

Services

Example fields:

- Clinic
- Police station
- Pharmacy
- ATM
- Laundry
- Grocery

Transport

Example fields:

- Route from Iloilo City
- Terminal
- Port
- Boat schedule notes
- Local transport

Attractions

Example fields:

- Gigantes Islands
- Island hopping
- Beach areas
- Food stops
- Tour operators

The data can be manually encoded for demo purposes.

12. Recommended Hackathon Tech Stack

Frontend:

- Next.js
- Tailwind CSS
- Shadcn/UI

Backend:

- Next.js API routes

Database:

- SQLite, Supabase, or PostgreSQL

AI:

- OpenAI, Claude, or Gemini API

Map:

- Leaflet with OpenStreetMap

Deployment:

- Vercel for frontend and API
- Supabase or hosted database if needed

For faster hackathon delivery, the scoring engine can be built directly in the backend or in a local service file using seeded data.

13. Data Model for Hackathon

Keep the data model simple.

Destination

- id
- name
- province
- municipality
- description

Listing

- id

- destination_id
- name
- category
- type
- latitude
- longitude
- details
- verification_status

The `category` can be one of:

- work_spot
- accommodation
- service
- transport
- attraction

Score Snapshot

- id
- destination_id
- overall_score
- internet_work_score
- accommodation_score
- safety_services_score
- transport_score
- tourism_lifestyle_score
- created_at

AI Recommendation

- id
- destination_id
- title
- affected_category
- recommendation
- priority
- generated_at

This is enough for a hackathon.

14. Winning Demo Script

Use this demo story:

“Carles, Iloilo is already a strong tourism destination because of island-hopping and Gigantes Islands. But for digital nomads, beautiful attractions are not enough. They need internet, work-friendly places, long-stay options, safety services, transport, and power backup.

NomadReady PH helps the LGU measure this readiness. The dashboard gives Carles a Digital Nomad Readiness Score, shows which areas are strong and weak, and uses AI to recommend what the tourism office should improve first.

Instead of guessing how to attract digital nomads, the LGU gets a clear action plan.”

15. Hackathon Success Criteria

The MVP is successful if judges can see:

- A working dashboard for Carles, Iloilo
- A Digital Nomad Readiness Score
- A clear breakdown of 5 readiness categories
- A simple map of local assets
- AI explanation of the score
- AI-generated recommendations
- A clear LGU action plan

The judges should immediately understand:

NomadReady PH helps LGUs become ready for digital nomad tourism.

16. Final Hackathon Positioning

NomadReady PH is not just another travel planner.

It is an **AI-powered LGU readiness tool** for the future of tourism.

It helps local destinations prepare for digital nomads by turning scattered local data into a clear readiness score, map, gap analysis, and AI-generated action plan.

The first pilot is:

Carles, Iloilo — from island tourism destination to digital nomad-ready destination.
